A method for treating a person experiencing a cardiac arrest is disclosed. The method may include providing a kit having four sections and a visual medium. The first section may include a ventilation system. The second section may include a drug delivery system. The third section may include one set of drugs. The fourth section may include another set of drugs. The visual medium may include a two sets of instructions. The method may also include accessing the first section of the kit to ventilate the person and the second section of the kit to provide for drug delivery to the person. The method may include determining whether the person is experiencing a first or second cardiac arrest condition. The method may additionally include accessing the third or fourth section of the kit, based upon the determination, to provide one of the sets of drugs to the person.
